

CEVFOLIO

Design & UI Specification

Professional Identity Platform

Product vision
Create your professional identity once. Use it everywhere. CEVFOLIO centralizes a user's professional profile and transforms it into CVs, portfolios, public profiles and AI-powered career assets.
Visual direction
Premium · Minimal · Professional · Modern · Responsive · AI-first

Prepared as the UI generation reference for Google Stitch and implementation with React + TypeScript + Tailwind CSS.

1. Product Identity

CEVFOLIO is a professional identity platform, not simply a CV builder. The professional profile is the single source of truth and feeds every other product surface.

Core ecosystem

Module	Purpose
Professional Profile	Source of truth for personal and professional information.
CVs	Multiple CVs generated from the same professional profile.
Portfolios	Visual professional websites built from profile data.
Public Profile	Shareable professional identity page.
AI Studio	Generate, improve, rewrite and adapt professional content.
Jobs	Analyze opportunities and create job-specific CVs.
Analytics	Track profile, portfolio and CV engagement.

2. Visual Design System

Use a maximum of three brand colors. The interface should remain predominantly neutral, with color used intentionally for hierarchy and interaction.

Role	Color	Hex	Usage
Primary	Indigo	#4F46E5	Primary actions, active navigation, links, selected states
Accent	Violet	#7C3AED	AI features, premium features, AI badges and highlights
Neutral	Near black	#111827	Text, headings, navigation and icons

Rule: white and very light gray may be used as interface surfaces/backgrounds. Do not introduce additional decorative brand colors. Avoid excessive gradients.

Typography & layout

Use a modern sans-serif similar to Inter. Establish a strong hierarchy with large bold headings, medium-weight section titles, readable body text and muted metadata. Desktop-first SaaS layout, 12-column grid where appropriate, maximum content width around 1280–1440px, responsive on tablet and mobile.

3. Application Structure

Public: Landing · Pricing · Login · Register · Forgot Password · Email Verification · Public Professional Profile

Application: Dashboard · Professional Profile · CVs · CV Builder · Portfolios · Portfolio Builder · AI Studio · Jobs · Analytics · Billing · Settings · Notifications

Admin: Admin Dashboard · Users · Subscriptions · Payments · AI Usage · Templates · Analytics · Prompt Management · System Logs

4. Screen Inventory

Screen	Purpose
Landing Page	Premium marketing page communicating the professional identity proposition and product ecosystem.
Login	Minimal authentication screen with email/password, Google authentication and password recovery.
Register	Low-friction account creation with professional onboarding preview.
Onboarding	Multi-step collection of personal information, title, experience, education, skills and projects.
Dashboard	Overview of profile completion, CVs, portfolios, analytics and AI recommendations.
Professional Profile	Central source-of-truth profile with sections for personal information, experience, education, skills, projects, certifications, languages and social links.
Experience	Timeline/list management with AI improvement actions.
Education	Education entry management.
Skills	Skill search, categories, proficiency and AI suggestions.
Projects	Project card grid and detailed project editor.
CV List	Management of multiple CVs, statuses, templates and exports.
CV Template Selection	Template gallery with categories such as ATS-friendly, minimal, modern, executive and creative.
CV Builder	Three-column editor: structure, live A4 preview and editing/customization panel.
CV Preview & Export	Document preview, ATS score, PDF/DOCX export and sharing.
AI Studio	Central workspace for AI-powered professional content generation and rewriting.
Portfolio List	Management of multiple portfolios with publication status and analytics.
Portfolio Template Selection	Visual template marketplace categorized by professional profile.
Portfolio Builder	Visual website builder with section structure, live preview and global theme controls.
Portfolio Preview	Responsive published-site preview with sharing and analytics.
Public Professional Profile	Public-facing identity page with CV, portfolio, experience, skills and contact actions.
Analytics	Views, downloads, clicks, traffic sources, devices and geographic insights.
Jobs	Job search, filtering, best matches and AI-powered job analysis.
Job Analysis	Match score, skills analysis, missing skills, keyword analysis and tailored CV action.
Billing	Free, Pro and Business plans, monthly/yearly toggle, current subscription and payment history.

Screen	Purpose
Settings	Account, security, notifications, privacy, appearance, connected accounts and data.
Notifications	AI, CV, portfolio, payment and job notifications.
Admin Dashboard	Users, revenue, subscriptions, AI costs, content generation and system health.
Admin Users	Searchable user table with filters and detailed account drawer.
Admin Templates	CV and portfolio template management.
Admin AI	AI requests, token usage, costs, prompt templates and model performance.

5. Master Prompt for Google Stitch

Design a complete premium SaaS web application called CEVFOLIO.

CEVFOLIO is a professional identity platform that allows people to create one central professional profile and transform it into professional CVs, portfolios, public professional profiles, AI-enhanced content and job-specific CVs.

Core philosophy:

"Create your professional identity once. Use it everywhere."

The Professional Profile is the single source of truth.

Visual identity:

- Maximum three brand colors.
- Primary: #4F46E5
- Accent: #7C3AED
- Neutral: #111827
- White and light gray may be used as interface surfaces.
- Indigo is used for primary actions and navigation.
- Violet is reserved mainly for AI and premium features.
- Avoid additional decorative colors and excessive gradients.

Design style:

minimal, premium, professional, modern, elegant, spacious, highly usable, responsive.

Use a modern sans-serif similar to Inter, subtle borders, restrained shadows, strong typography, generous whitespace and consistent spacing.

Use a desktop-first SaaS layout with responsive tablet and mobile behavior.

Use production-quality interfaces, not wireframes.

Use realistic professional content instead of lorem ipsum.

All screens must feel like one coherent CEVFOLIO ecosystem.

6. Priority Screen Prompts

Dashboard

Design the main CEVFOLIO dashboard. Use a left sidebar and top navigation. Sidebar: Overview, Professional Profile, CVs, Portfolios, AI Studio, Jobs, Analytics, Billing, Settings. Show a welcome message, profile completion score, professional identity card, CVs, portfolios, AI suggestions and recent activity. Use a clean premium SaaS layout with restrained indigo accents and violet only for AI features.

Professional Profile

Design the CEVFOLIO Professional Profile overview. The profile is the source of truth for the entire ecosystem. Show profile photo, full name, professional title, location, completion percentage, public URL, professional summary, experience, skills, projects and education. Add AI recommendations. Navigation tabs: Overview, Personal, Experience, Education, Skills, Projects, Certifications, Languages, Social Links.

CV Builder

Design the CEVFOLIO CV Builder with a three-column desktop layout. Left: CV structure with draggable sections. Center: live A4 CV preview. Right: editing and customization controls. Toolbar: CV name, autosave, undo, redo, preview, download PDF and share. Include typography, spacing, color, margins, photo and layout controls. AI actions: Improve, Rewrite, Shorten, Make more impactful, Adapt to job. Include ATS score.

Portfolio Builder

Design the CEVFOLIO visual Portfolio Builder. Left: page sections such as Hero, About, Experience, Skills, Projects, Education, Certifications, Testimonials, Contact and Social Links. Center: live website preview. Right: selected section settings. Support drag-and-drop, text editing, images, colors, typography, spacing, animations and visibility. Toolbar includes undo, redo, desktop/tablet/mobile, preview and publish.

AI Studio

Design the CEVFOLIO AI Studio. Provide feature cards for Professional Summary, Experience Description, Project Description, Skills Suggestions, CV Optimization, Job Matching and Translation. Include a conversational AI panel, generated results, before/after comparison, Apply Changes, Regenerate and Copy. Violet is reserved for AI visual language.

Public Profile

Design the public CEVFOLIO professional profile page. Hero includes profile photo, full name, professional title, location, summary, social links, Download CV, View Portfolio and Contact. Sections: About, Experience, Skills, Projects, Education, Certifications and Languages. Make it feel like a premium professional identity website.

7. UX States

Every CEVFOLIO screen must define: default, loading, skeleton, empty, success, error, validation error, disabled, hover, focus, confirmation modal, delete confirmation, unsaved-changes warning, network error and permission error. Messages must be actionable and specific.

8. Core Component Library

- Buttons, icon buttons, inputs, textareas, selects, checkboxes, radios and switches
- Cards, badges, avatars, dropdowns, modals, drawers, tooltips, alerts and toasts
- Tabs, breadcrumbs, progress bars, steppers, pagination and data tables
- Sidebar, topbar, mobile navigation and command/search interface
- KPI cards, line charts, bar charts and donut charts
- AI action buttons, AI result panels, before/after comparison
- CV document preview, portfolio website preview and drag-and-drop section editors
- Empty states, skeletons, upload components and confirmation dialogs

9. Product Architecture Reference

Recommended stack: Laravel 12+ · React · TypeScript · Tailwind CSS · MySQL · Redis · REST API · S3
· KryptPay (behind a PaymentService abstraction) · AI/LLM API.

Core data model

```
User
├── ProfessionalProfile
├── Experience
├── Education
├── Skill
├── Project
├── Certification
├── Language
├── SocialLink

ProfessionalProfile
├── CV → CVTemplate → CVSection
├── Portfolio → PortfolioTemplate → PortfolioSection → CustomDomain

User
├── AIRequest → PromptTemplate
├── Subscription → Payment → PaymentWebhook
├── File
├── Notification → NotificationPreference
├── AnalyticsEvent → PortfolioView
```

10. MVP Scope

- Authentication and account verification
- Professional profile and core profile data
- Experience, education, skills and projects
- AI summary and content improvement
- Three CV templates
- PDF CV export
- Two portfolio templates
- Basic portfolio customization
- Public portfolio URL
- Dashboard
- Free and Pro plans

Future versions

V2: CV PDF/DOCX import, LinkedIn/GitHub integrations, ATS optimization, job-specific CVs, more templates, custom domains, advanced analytics, QR codes and DOCX export.

V3: job matching, cover letters, interview preparation, multilingual support, marketplace, B2B and API.

11. Implementation Notes for the Developer

- Keep the ProfessionalProfile as the source of truth; CV and Portfolio content should reference or snapshot profile data deliberately.
- Use reusable React components and Tailwind design tokens rather than page-specific styling.
- Keep AI responses structured as validated JSON rather than raw HTML.
- Run expensive AI/PDF generation asynchronously through Redis queues and Laravel workers.
- Keep payment credentials and provider secrets server-side; use a PaymentService abstraction.
- Use policies, validation, rate limiting, signed storage URLs and webhook idempotency.
- Design mobile behavior from the beginning, especially for profile editing and document builders.

CEVFOLIO — Professional identity, built once and used everywhere.
